Professional Summary

Final-year MSc student in Data Science and AI at Data ScienceTech Institute (DSTI), Paris, seeking a Data Science Internship starting January 2027. Skilled in Python, SQL, data analysis, statistical techniques, and machine learning, with hands-on experience in data preprocessing, feature engineering, and predictive modelling. Strong analytical and problem-solving abilities, with a passion for transforming data into actionable insights and developing data-driven solutions.

Education

MSc in Data Science and AI (Bac+5) **Oct 2025 – Nov 2027**
Data ScienceTech Institute (DSTI), Paris, France

Bachelor's Degree in Computer Science (Bac+4) **Nov 2023 – May 2025**
Sri M Visvesvaraya Institute of Technology, Bangalore, India

Professional Experience

AI & Machine Learning Intern **Sep 2024 – Jan 2025**
Rooman Technologies, Bangalore, India

- Used Python and SQL to clean, transform and prepare structured and semi-structured datasets for machine learning and data analysis workflows & performed data preprocessing and quality checks to identify inconsistencies and improve dataset reliability.
- Supported machine learning experimentation by analysing model performance results and comparing different approaches.

Front-End Web Development Intern **Oct 2023 – Dec 2023**
Varcons Technologies, Bangalore, India

- Developed responsive web interfaces using HTML, CSS and JavaScript.
- Tested and debugged interface components to identify issues and improve application functionality and usability.

Academic Projects

Cyber Attack Detection **Nov 2025 – Mar 2026**

- Analysed approximately 40,000 network traffic records to identify DDoS, malware and intrusion-related attacks.
- Performed data cleaning, preprocessing and feature engineering to prepare data for analysis and model development.
- Built and evaluated machine learning classification models, including Random Forest, Gradient Boosting and XGBoost.

Fake Account Detection **Jan 2025 – May 2025**

- Developed a machine learning approach to identify potentially fake social media accounts using behavioural and profile-related features & applied text preprocessing, tokenization and TF-IDF to extract relevant information from text data.
- Evaluated SVM and Neural Network models using precision, recall, F1-score and ROC-AUC.
- Developed backend APIs using Django REST Framework to support the application.

Technical Skills

- **Programming:** Python, SQL, Java
- **Data Analysis:** Pandas, NumPy, Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA), Statistical Analysis
- **Machine Learning:** Scikit-learn, Classification, Random Forest, Gradient Boosting, XGBoost, SVM, Neural Networks
- **ML Techniques:** Feature Engineering, Feature Selection, Model Evaluation, Cross-Validation, Hyperparameter Tuning
- **Natural Language Processing:** Text Preprocessing, Tokenization, TF-IDF
- **Tools & Frameworks:** Jupyter Notebook, RStudio, Streamlit, Django, Django REST Framework, Git, GitHub, VS Code
- **Generative AI:** LLM Fundamentals, Claude API (Coursework and Training), Agentic AI Fundamentals

Research Publication

Fake Account Detection in Social Media Using Machine Learning and Django Framework
International Journal of Innovative Research in Technology (IJIRT), Volume 11, Issue 12, Paper ID: 178231, May 2025.
